## Summary

I was born in Lombok, Indonesia. I studied at Bumigora University majoring in Visual Communication Design (DKV). My main skill is creating mobile application programs and also specific websites using the React library. In addition to coding skills, I do a lot of activities related to graphic design to creating user interfaces for an application or websites.

Currently, I work a lot on android-based applications using the React Native library, one of my latest portfolios is a prekuel app, which is an application that displays news related to film information that I wrote myself. Apart from making website programs, I have also been actively writing at prekuel.com since April 2022 until now. And I am the core team for the Creative design section at the Google Developer Student Club at Bumigora University, I actively help make designs for every GDSC event and all things related to design.

In early March 2022, I worked remotely as a junior frontend developer for 1 month at a company in Jakarta. We developed a website that regulates the management of pensioners for customers of one of the banks in Indonesia. That brief experience gave me many lessons related to work systems in the IT field, especially in the programming field.

I really like programming, and always follow the latest updates about programming. Especially for React libraries. My hope in the future is that I can help more people with programming, either individually with the projects I make, or as a contribution to the team.

## Experience

### Frontend Developer

Payon indonesia

Feb 2021 - Present (1 year 11 months +)

I have worked at Payon Indonesia, which is an application that is engaged in digital services as a designer and front-end developer who works on banner designs, icons, and design needs for other applications. I also work as a frontend developer in charge of making some features in the application.

## Education

### Universitas Bumigora

Student, Design and Visual Communications, General

Mar 2020 - Feb 2024

I studied at one of the universities in Lombok, Bumigora University of Mataram, and majored in visual communication design. I studied programming since high school at that time majoring in software engineering and began to develop myself as a self-taught front-end developer. I majored in design in college to increase my sensitivity to design that I can apply to any website I create.
